

Check integration status

Read the summary, filter services and verify Google Calendar details.

4 min · Integrations module active · 2026-09-21

Before you begin

- ✓ Open the community or pastoral unit whose connections you want to inspect.
- ✓ Your access must include management of the relevant integration.

1 STEP 1 OF 4 · 1 MIN

Read the summary

Open Settings > Integrations. The summary shows how many services are connected in the active context and adds the number of Google Calendar conflicts when present.

The count describes existing configurations. To see whether a service needs attention, also inspect its row warning and open its details.

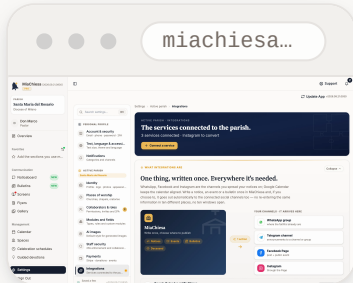

Fig. 1 The summary gives an overview of the active context.

2 STEP 2 OF 4 · 1 MIN

Filter the list

Use All to see every available service, Active to show existing configurations and To connect to find services that still need setup.

In the Google Calendar row, check "connected", direction, account or calendar, count and displayed recent activity. A conflict or invalid-connection warning needs attention.

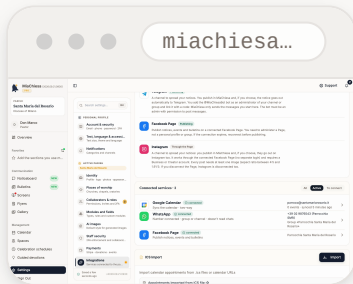

Fig. 2 Active narrows the list to integrations with a configuration in the current context.

3

STEP 3 OF 4 · 1 MIN

Open Google Calendar details

Open the connected row. Under Connection, check Google account, Google Calendar, direction, period, synced-event count and last sync.

"Connected" means that a configuration exists. The last-sync time and an appointment check better indicate whether data is current. Normal temporary Google access expiry is not shown as a fault because access refreshes automatically.

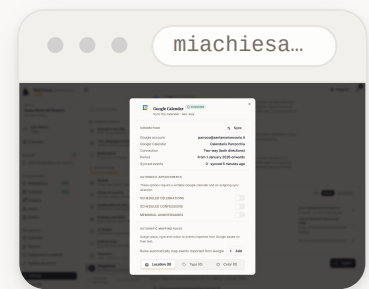

Fig. 3 The panel brings together the details needed to distinguish an existing configuration from recent activity.

4

STEP 4 OF 4 · 1 MIN

Interpret warnings

If Reconnect Google Calendar or Invalid Google connection appears, complete a new authorisation before expecting further exchanges.

If a conflict count appears, use Resolve and inspect both versions. If there is no warning but the last sync is old, run a manual sync and check its final message.

What you have achieved

- ✓ You identified active services, services to connect and warnings in the correct context.
- ✓ For Google Calendar, you checked configuration, recent activity and any conflicts.

Troubleshooting

Google Calendar is missing from the list

Select All and verify that your access includes Sync Google Calendar in the active scope.
